CDFA Intro Energy & Water Finance Course.

September 13-14, 2016
New York, NY

Energy development & water finance are the fastest growing areas of development finance nationwide. From new production facilities and renewable energy source development to the retrofitting and renovation of existing infrastructure to support efficient energy & water projects, this finance has become a driving force in the economic development community.

CDFA's Intro Energy & Water Finance Course explores the wide range of tools available for financing energy & water projects, including bonds, tax credits, revolving loan funds, grant programs, and more. This course will cover how new energy production/generation, energy efficiency, retrofitting and support programs are used throughout the country to encourage investment in large and small projects alike.

The Intro Energy & Water Finance Course begins with an overview of the complex energy development industry and introduces attendees to the terminology and technology driving this movement. We'll then examine the entire spectrum of energy financing solutions from bonds to revolving loan funds and innovative incentive programs available to businesses, home owners, development professionals, investors, and government entities.

Day two of the Intro Energy & Water Finance Course will focus on financing water infrastructure development. Because water financing has become one of the critical financing needs in the development finance industry, speakers will explore programs and resources available through the federal government to support water infrastructure development. This course is essential for public leaders, economic development professionals, financial experts, and anyone working to address energy development challenges.
