Municipal Finance Law Since 1971

How Puerto Rico's Bankruptcy is Roiling the Municipal Bond World

Puerto Rico's debt crisis is taking a toll on the mainland municipal bond market.

Municipal participants say the ripple effects from the biggest municipal bankruptcy have shaken investor confidence in lower-rated states and cities, legal promises, and credit ratings in general. Of particular concern is a ruling by Title III judge Laura Taylor Swain that upset expectations regarding special revenue bonds, which had continued to generate payments in previous bankruptcies.

In her ruling on Jan. 30 in a case involving the bonds of the Puerto Rico Highways and Transportation Authority, Convention Center District Authority, and Infrastructure Finance Authority, Swain said the fact the bonds were special revenue bonds didn't require the issuers to continue paying in a Chapter 9 bankruptcy. Puerto Rico is in a Puerto Rico Oversight, Management, and Economic Stability Act Title III bankruptcy that incorporates the Chapter 9 bankruptcy provisions on these bonds.

"The fact that an automatic stay does not apply to special revenues and that payments should continue to bondholders has been accepted as common knowledge by the investing public," said Wells Fargo Securities managing director Natalie Cohen. Swain's decision has "cast doubt" on that.

Cohen pointed out that a federal website of the Administrative Office of the U.S. Courts summarizes a part of Chapter 9 saying, "Holders of special revenue bonds can expect to receive payment on such bonds during the Chapter 9 case if special revenues are available."

Bond insurers Assured Guaranty (AGO) and National Public Finance Guarantee are preparing an appeal of the Swain ruling and Cohen said this may clarify its impact. For the time being, the "decision has caused concern about the safety of special revenues of distressed borrowers."

Peter Block, head of municipal credit strategy at Ramirez, said if Swain's decision is upheld, market participants may not respect special revenue bonds in the future.

Fitch Ratings thought Swain's decision was important enough to put out a six-page "special report" on the topic, "What Investors Want to Know: The Impact of the Puerto Rico Ruling on Special Revenue Debt."

On March 9 Fitch said it would include a warning in its commentaries on credits that might be affected by a final court ruling on Swain's decision. Among other things, the warning comment says about special revenue bonds, "The outcome of the litigation could result in modifications to Fitch's approach."

Municipal bond participants have responded to Puerto Rico's bond meltdown in their U.S. dealings not just since Swain's January decision but also over the last several years. Some have become more cautious about purchasing bonds from distressed issuers.

On Feb. 13 one of the historically biggest holders of Puerto Rico debt, Franklin Templeton Investments, said it had learned its lessons from its experience of the islands' slide into multiple defaults. "As a result of lessons recently learned, the Franklin municipal bond group generally does not purchase general fund appropriation debt from cities, counties or states that in our view are facing unsustainable structural budget situations," two co-directors of the group wrote in "Fundamental Changes That No Muni Investor Should Ignore."

"As real examples, the Franklin municipal bond group has divested from – and currently won't invest in – obligations of the State of Illinois, the City of Chicago and Chicago Public Schools, no matter what they offer in terms of security," Co-Directors Sheila Amoroso and Rafael Costas wrote.

Franklin Templeton managed 24 municipal bond bonds as of November 2016 that held more than \$1.5 billion of Puerto Rico bonds.

"As the financial picture there deteriorated, we began to reduce our exposure," the authors wrote. "Unfortunately, by the time Puerto Rico made known its intentions to default on its debts we had not completely exited our position."

The U.S. Virgin Islands, which has its own financial problems, has struggled with the shadow of Puerto Rico's default. The latter's default played a role in the Virgin Islands' inability to sell bonds in the late summer of 2016 and January 2017 for operating expenses.

In August 2017 the Virgin Islands' Water and Power Authority, also in extreme financial difficulties, had to offer 11% annual interest on a 35 month duration bond to gain a buyer.

In Detroit's bankruptcy the judge treated general obligation bonds as unsecured debt, Block noted. In Puerto Rico the island has defaulted on its GO debt and now Swain is saying the special revenue bonds don't have to be paid in bankruptcy either. "People have learned to look more carefully at what they own," Block said.

On Feb. 5 S&P Global Ratings agreed, titling a commentary, "Puerto Rico Court Ruling Supports Our View That Credit Fundamentals Remain Key To Ratings." The piece commented on recent Swain rulings on both GO and special revenue bonds.

"The continuing uncertainty surrounding outcomes for Puerto Rico bondholders reinforces that credit fundamentals matter even where legal protections appear strong," S&P Analyst David Hitchcock wrote. "We have incorporated this approach into all of our GO and revenue bond ratings."

The Puerto Rico crisis also undercut the market's faith in credit ratings.

Block said that the market and institutional investors in particular have lost some confidence in ratings over the past 10 years and have bolstered credit staffs to monitor underlying credit quality of holdings. The confidence was shaken by ratings that eroded very quickly on some mortgage-backed bonds prior to the 2008 financial crisis and some ratings that went bad more recently, namely those for Detroit and Puerto Rico.

Block said in hindsight the agencies probably should have rated Puerto Rico speculative grade shortly after the island began to deficit finance the general fund (via COFINA) following the onset of the Puerto Rican recession in 2006.

Prior to the 2008 financial crisis, ratings had a 90% influence on where bonds traded, Block said. Now the influence is closer to 40% to 60%.
