Key Takeaways

- Small hospitals' ratings are skewed toward the lower end of the spectrum compared to all standalone hospitals given inherent risks associated with small hospitals, including small medical staffs and often small and narrow-based economies.
- The outlook distribution for small hospitals is consistent with the outlook distribution for the overall stand-alone sample.
- Compared to 2017, 2018 individual rating level results for the small hospital sample vary by rating level with a combination of improvement and declines.
- Compared to the broad stand-alone universe, balance sheet metrics including days' cash on hand, unrestricted reserves to long term debt and leverage, are significantly better. Operating margins; however, vary by rating category. Generally, small hospitals need to have stronger financial metrics than their larger stand-alone counterparts to achieve comparable ratings.
