More US Water Systems Struck by Hackers.

The FBI said systems in at least seven states have been hit, following an Iran-linked group's hack in Minnesota. Experts urged operators to beef up operational technology cybersecurity.

What started as a cyber attack on water systems in [Minnesota](#) has appeared to spread to a number of other states, as more and more such systems report being hacked in an effort that has been linked to Iran.

[Michigan](#) and [Georgia](#) were among the latest to say at least some of their water systems had been compromised, with the focus of the attacks appearing to be against programmable logic controllers, which command various pieces of water equipment. The Federal Bureau of Investigation and Environmental Protection Agency late last month issued a [joint statement](#) warning that water and wastewater utility companies in at least seven states had been hit.
