Deloitte: Cybersecurity for Critical Infrastructure.

Cyberattacks on critical infrastructure have grown increasingly sophisticated and effective, so it is important that states expand their risk mindset and take a leadership role in addressing cyber risks. In our new report, [Cybersecurity for critical infrastructure: A growing, highly visible threat calls for state leadership](#), we take a deeper look at the challenges that cyberattacks present and detail how states can better prepare for the threats.

Building an effective program for managing cyber risks will require time, commitment, and close cooperation. Learn how states can be program leaders in driving public-private collaboration for sharing information, raising awareness of roles, and establishing a unified response to cyberattacks on critical infrastructure.
