Fitch U.S. Not-For-Profit Hospitals and Health Systems Criteria Revision.

Fitch Ratings finalized its new criteria for U.S. not-for profit hospitals and health systems, the changes of which are detailed in a new report and companion piece. These revisions will facilitate a more forward-looking, predictable approach to ratings and better highlight differences among credits in the same category.

Anticipated Rating Impact Limited

Fitch expects criteria-driven rating changes to affect less than 15% of the portfolio, with a roughly equal mix of upgrades and downgrades. Upgrades are likely for issuers with enhanced revenue defensibility characteristics or less volatility in Fitch's through-the-cycle analysis, while downgrades are likely for issuers with elevated operating risk and leverage, which expose them to greater volatility in a through-the-cycle analysis.

Rating Changes More Predictable

In a sector characterized by low default risk, insight into an issuer's vulnerability to adverse conditions and credit deterioration is of paramount importance. The revised criteria more clearly define and communicate Fitch's expectations of the range of performance within which a rating is expected to be stable, versus conditions which could prompt a rating change.

New Through-the-Cycle Tools

Fitch is incorporating forward-looking tools into the rating process. Revenue sensitivity and scenario analysis tools work together to consider both the expected 'base case' financial performance within a typical business cycle and the 'rating case' potential financial performance given a moderate downturn. Known as FAST, this tool highlights how cycles affect issuers differently, and will be publicly available during the criteria comment period.

Experienced Analytical Judgment

Fitch's ratings will continue to be based on the judgment of a team of experienced analysts rather than model-based outcomes. Given the diverse characteristics and wide range of U.S. not-for-profit hospital and healthcare credits, Fitch believes there are clear limits to the degree to which data points and formulas can define them.

Clearer Communication of Credit Opinions

The goal of the revised criteria is to communicate Fitch's credit analysis more clearly, presenting well-defined opinions about both rating conclusions and the underlying fundamentals. This will provide greater differentiation among credits, increased insight into what could trigger a rating change, and facilitate comparison of Fitch's credit opinions with others in the marketplace.

Focused Key Rating Factors

Three focused key rating factors replace the traditional inventory of credit considerations to highlight the role that each plays in determining credit quality. The information that Fitch reviews is largely unchanged; however, the way this information is incorporated into integrated and transparent analysis is much improved.

Tailored Versus Generic Expectations

As part of an integrated analytical approach, expectations are linked to issuer-specific risk factors. For example, rather than having a blanket level of liquidity or leverage judged to be consistent with a given rating category, Fitch considers the issuer's fundamental financial flexibility and sensitivity to downturns against an issuer-specific operating cost flexibility assessment and the asset allocation of its unrestricted liquidity.
