- Why Does Adaptation Remain A Small Part Of The Labeled Bond Market?
- Recent Proposals To Increase Investment In Adaptation And Resilience
- Though Well-Suited For Adaptation Finance, Persistent Challenges Will Impede Rapid Market Segment Growth
- Trends To Watch In Municipal Adaptation Finance

Key Takeaways

- U.S. municipal self-labeled green bond issuance had its strongest year yet in 2019, with 99 issues totaling \$10.1 billion in issuance, or 2.4% of the total municipal market.
- Based on recent trends, we project 2020 municipal green issuance of \$11.4 billion to \$14.0 billion in 2020, with a most likely amount of \$13.2 billion.
- Municipal issuers are also issuing debt carrying other labels intended to highlight a financing's environmental, social, and governance (ESG) credentials, most notably sustainability bonds (\$2.8 billion in 2019) and social bonds (\$621 million).
- For the first time, in 2019, the majority of municipal green bonds had external verification, and 23% of sustainability bonds were Climate Bond Certified.
- Resilience continues to emerge in budgets and capital plans as a focus area for municipal governments, although challenges remain to financing large-scale resilience and adaptation projects.
- Debt financing of adaptation projects remains a largely undeveloped portion of the green bond market, and a mostly untapped portion of the broader municipal market.
