S&P U.S. Local Governments Credit Brief: California Counties And Municipalities Means And Medians

Overview

California counties and municipalities (or local governments [LGs]) have maintained or improved credit quality during the past year through a combination of conservative budgeting practices, better-than-expected local revenue performance, and the receipt of stimulus funds to aid recovery from the COVID-19 pandemic. However, macroeconomic conditions–including high inflation and the rising risk of recession–are headwinds for rated issuers, and S&P Global Ratings is focused on labor negotiations as employees face the prospect of negative wage growth in real terms absent larger-than-typical compensation increases. We expect growing tax bases and very strong budgetary flexibility stemming from recent positive operating results to partly mitigate these challenges.

S&P Global Ratings maintains ratings on 259 LGs within the state. Overall, LG credit quality remained stable, with 5% experiencing rating actions since October 2021. During this period, we took seven positive rating actions and revised six outlooks to positive on general obligation or general-fund-secured bonds with no negative rating actions. In addition, almost 99% of the ratings have a stable outlook. We have negative outlooks on our ratings for one county (Madera County) and two municipalities (Anaheim and Torrance), and a positive outlook on the ratings for one municipality (Vallejo). Although we revised the outlook to negative on 3% of our ratings on California LGs in 2021, we revised most of those outlooks to stable in 2022 based on the LGs' resilience through the pandemic and the credit pressures that we anticipated at the outset either not materializing or being mitigated by the receipt and use of stimulus funds.
